REYON LAU JIEMIN

Backend Developer - Laravel / PHP

Pagedangan, Tangerang, Banten | +62 852-1153-0920 | liurey55@gmail.com | github.com/Reyonl

PROFILE

Informatics Engineering graduate (GPA 3.56) focused on backend development in Laravel/PHP. Experienced building production systems end-to-end: designing a REST API consumed by two clients at once (web and Android), modeling relational databases, writing automated tests, and deploying & debugging directly on production servers. Comfortable with AI-assisted coding workflows while still reading and testing every change.

CERTIFICATIONS

BNSP Certified Web Programmer - Badan Nasional Sertifikasi Profesi (BNSP)

April 10, 2026 - valid for 3 years

TECHNICAL SKILLS

Backend: PHP 8.3, Laravel, Livewire, REST API, MySQL, Composer, Midtrans Payment Gateway (Snap API), request authentication & validation

Frontend: React, JavaScript, TypeScript, Tailwind CSS, Next.js, Blade

Mobile & Tools: Flutter, Dio, Bluetooth thermal printer, Git, GitHub Actions (CI/CD), Docker (basic), Postman, Linux/Windows CLI

Concepts: MVC, relational database design, automated testing (PHPUnit/Pest, flutter_test, Vitest), production debugging, Git workflow

INTERNSHIP EXPERIENCE

Pusdiklat BPS (Statistics Indonesia) - Public Relations Intern | January - March 2026

Education and Training Center, BPS - Database Administrator - Creative Team

Served as database administrator for the Public Relations division: managed and maintained the internal database, performed data entry and validation, and ensured data remained complete and accurate.

Joined the creative team producing the memoir of the Head of Pusdiklat BPS ahead of retirement: curated materials, drafted content, and supported documentation.

PROJECT EXPERIENCE

Warung Lupi - POS & Bookkeeping System (Web + Android) | 2025 - 2026

Laravel, PHP 8.3, MySQL, React, Flutter, REST API

Designed and built a Laravel REST API as the single source of data for two clients: a web app and an Android app.

Built the credit/settled/receivables modules, automatic promotion rules, and per-item sales reports; shipped with automated tests and CI/CD, used daily on a production domain.

Diagnosed production server issues (database connectivity & shared-hosting rate limits) and added a client-side retry with backoff mechanism.

Gadai Enoni Cell - Pawnshop Management System (2-person team) | 2025

Laravel, PHP 8.2, MySQL, Midtrans Snap

Integrated Midtrans Snap payment gateway for redemption & extension payments: create/resume/reprocess/cancel, Snap token generation, and a webhook notification handler that syncs transaction status (sandbox).

Built the pawnshop business backend: redemption, extension, auction, price appraisal, tenor interest, branch balances, multi-branch transactions - Eloquent + 29 migrations, multi-role (superadmin/admin/staff/customer).

Enforced transaction integrity: prevented double payment & redemption of already-redeemed items; pending payment state with resume/reprocess; server/client keys via .env, 3DS.

DAILY.CO - Custom Apparel Ordering System (Undergraduate Thesis) | 2025 - 2026

Laravel, Livewire, Fabric.js, Tailwind CSS, MySQL

Built a multi-zone canvas design editor (Fabric.js) that turns a custom apparel design directly into an order without back-and-forth communication; order flow with admin verification.

Wrote 46 tests (11 files) running automatically in CI against MySQL.

Hermes DevOps - Build, Test & Release Automation CLI (private repo) | 2026 - present

TypeScript, Node.js, Git, GitHub Actions

Built a CLI that detects a project's stack and runs build/test/release behind SAFE/REVIEW/DANGEROUS security gates, refusing to report success without evidence.

Wrote 198 automated tests with an append-only audit trail; released up to v0.7.5.

Personal Portfolio Website | 2026

Next.js, TypeScript, Tailwind CSS, Framer Motion

Built from scratch; Lighthouse 100/100/100 on desktop; every project claim linked to a verifiable repository & artifact.

EDUCATION

Bachelor of Informatics Engineering - Universitas Pamulang | 2022 - 2026 | GPA 3.56 / 4.00

Thesis: web-based custom apparel ordering system with a canvas design editor (Laravel, Livewire, Fabric.js).
