# REYON LAU JIEMIN

**Backend Developer (Laravel / PHP)**

Pagedangan, Tangerang, Banten | +62 852-1153-0920 | liurey55@gmail.com | github.com/Reyonl

## PROFILE

Informatics Engineering graduate (GPA 3.56) specializing in Laravel and PHP backend development. Experienced in building multi-tenant web applications, designing REST APIs for web and mobile clients, managing relational MySQL databases, integrating payment gateways, and maintaining automated test suites.

## CERTIFICATIONS

**BNSP Certified Web Programmer** — Badan Nasional Sertifikasi Profesi (BNSP) | April 10, 2026 · Valid for 3 Years

## TECHNICAL SKILLS

**Backend:** PHP 8.3/8.4, Laravel, Filament PHP, Livewire, REST APIs, MySQL, SQLite, Midtrans Snap, Composer
**Frontend:** Blade, Tailwind CSS, JavaScript, TypeScript, React, Next.js, Alpine.js
**Mobile & Tools:** Flutter, Git, GitHub Actions (CI/CD), Postman, Docker, Bluetooth Thermal Printer
**Concepts:** MVC Architecture, Relational Database Design, Automated Testing (PHPUnit), Multi-tenancy, Webhook Integration

## INTERNSHIP EXPERIENCE

**Pusdiklat BPS (Statistics Indonesia) — Public Relations Intern** | January – March 2026
*Database Administrator & Creative Team*

• Maintained internal databases for the Public Relations division, ensuring data accuracy and record integrity for training records and institutional archives.
• Collaborated with the creative team on content curation, media documentation, and memoir publication for the retiring agency director.

## PROJECT EXPERIENCE

**SayWed — Digital Wedding Invitation SaaS Platform** | 2026 – Present
*Laravel, Filament PHP, MySQL, Tailwind CSS, Alpine.js*

• Built a multi-tenant wedding invitation SaaS platform on Laravel and Filament v3, featuring dedicated admin backoffice and customer workspace panels.
• Engineered guest RSVP reservations with duplicate prevention, atomic handling for concurrent attendance quotas, and rate limiting to block spam.
• Implemented an automated asset optimization pipeline (ImageOptimizer) converting high-resolution uploads to WebP under hosting memory limits; verified with PHPUnit.

**Warung Lupi — Retail POS & Bookkeeping System (Web + Android)** | 2025 – 2026
*Laravel, PHP 8.3, MySQL, React, Flutter, REST API*

• Designed and built a unified Laravel REST API synchronizing catalog data and sales transactions between a React web dashboard and a Flutter mobile POS app.
• Developed customer credit tracking (receivables), tier-based promotional rules, and daily profit/loss reports used in daily retail operations.
• Resolved shared hosting rate limits and connectivity dropouts by implementing client-side request retries with exponential backoff.

**Gadai Enoni Cell — Pawnshop Operations Management System** | 2025
*Laravel, PHP 8.2, MySQL, Midtrans Snap*

• Integrated Midtrans Snap payment gateway to handle online collateral redemptions and contract extensions, including webhook notification verification.
• Developed core pawnshop workflows: collateral appraisal, automated interest calculation by tenor, auction scheduling, and multi-branch cash balancing.
• Enforced transaction integrity and prevented double-redemption attempts using atomic database locks and strict collateral state validation.

**DAILY.CO — Custom Apparel Ordering System (Undergraduate Thesis)** | 2025 – 2026
*Laravel, Livewire, Fabric.js, Tailwind CSS, MySQL*

• Built a web-based custom printing platform with an interactive canvas editor (Fabric.js), allowing customers to customize artwork placement directly on mockups.
• Implemented dynamic print-area pricing calculations, order approval workflows, and administrative review gates before printing.
• Created automated test suites using PHPUnit against MySQL to verify end-to-end order processing, price calculations, and file upload validations.

## EDUCATION

**Bachelor of Informatics Engineering — Universitas Pamulang** | 2022 – 2026 | GPA 3.56 / 4.00
Thesis: Web-Based Custom Apparel Ordering System with Interactive Canvas Design Editor (Laravel, Livewire, Fabric.js).
